User Acceptance Testing

Login, upvote, and downvote are three features that must be tested for CUReview's site. The following user acceptance test cases will test these three features in a number of ways. This will ensure that the site performs as intended under varying login and vote statuses.

Test 1

Step	Test Step/Input	Expected Result	Result
1	On the home page click on the sign-up button in the navbar.	The register page will be prompted.	
2	Fill out the registration page with new user email and password. Then submit.	New User account should be created and the user is now on the classes page.	
3	Click on the green up button for one class on the list.	The class score should increase by one.	
4	Click on the red down button for a different class in the list.	The class score should decrease by one.	

Case one tests that new users can be created and login to the site. Also testing to check if that new user is able to up and down vote classes in the list.

Test 2

Step	Test Step/Input	Expected Result	Result
1	On the home page click on the login button in the navbar.	The login page will be prompted.	
2	Login in with email user124@mail.com With password 1234.	Existing User account should log in and see classes page.	
3	Click on the green up button for one class on the list.	The class score should increase by one.	
4	Click on the green up button for the same class in the list.	The class score should not change and the button should be grayed out and inactive.	
5	Click on the red down button for the same class in the list.	The class score should decrease by one, and the green button should become active.	
6	Click on the green up button for the same class in the list.	The class score should increase by one, and the red button should become active.	

Test 2 tests that existing users can log in. Next testing that users can only up or down vote each class once and radio button disable once the user has voted.

Test 3

Step	Test Step/Input	Expected Result	Result
1	On the home page click on the login button in the navbar.	The login page will be prompted.	
2	Login in with email user124@mail.com With password 1234.	Existing User account should log in and see classes page.	
3	On the class page click on the user icon in the navbar and click sign out.	The account will log out and the user is sent back to the home page of the site.	

Test 3 will test the for user login as well as the logout functional of the user icon on the classes page.
